

THIS WINTER, GIVE YOUR HOUSE

A TUNE-UP AND SAVE MONEY AND ENERGY.

Making a few smart changes could save you big money this winter. For example, if you're planning to replace your gas furnace, choose an ENERGY STAR[®] qualified model with an efficiency rating of 90%-94%* and you could get a utility rebate of about \$200. Upgrading attic and wall insulation could save you about \$17 a month. And just lowering your thermostat 3-5 degrees (health permitting) can help you save another \$13 a month on heating costs. For more ways to stay warm and save money and energy, call us or visit our website.
